

Templates in Joomla! 1.5

By Charl van Niekerk

Joomla! 1.5 Architecture

MVC Process

1. Controller is called
2. Controller loads model
3. Controller loads view
4. Controller assigns model to view
5. View loads template
6. Template is populated and displayed

Google Summer of Code

- Semantic Web Integration
 - Make XHTML W3C Compliant
 - Validation
 - Semantics
 - Add Richer Semantics
 - Microformats
 - Accessibility
 - Multiple Access Devices / Mediums
 - Improved User Experience for Disabled Persons
- Usability
